MITOCHONDRIA | Longitudinal Examination Record

ALEX MORGAN | Synthetic Astronaut | 12-13 November 2026

SYNTHETIC TEST DATA - NOT A REAL PATIENT - NOT A CLINICAL DIAGNOSIS

Purpose

Two consecutive examination dates designed to test MITOCHONDRIA P61.3 PDF intake, date-specific longitudinal measurements, duplicate protection and P60 reporting. The 12 November values are copied exactly from the supplied original synthetic booklet; 13 November values are newly invented follow-up observations. All 76 values are synthetic.

Scope: 2 dates (12 and 13 November 2026), 38 measurement types, 76 observations. Both collection times: 09:00 UTC.

Expected intake: 76 extracted; approximately 62 accepted and 14 unresolved under the reported P61.3 catalog state, subject to actual reconciliation and existing stored records.

Important duplicate test: If 12 November observations from the original eight-date PDF are already stored on the same device and mission, they may be flagged as possible duplicates because this is a different source file. Review before saving; do not blindly confirm duplicate rows.

Measurement methods, specimen types and clinical context remain incomplete. No scientific approval, diagnosis or new clinical thresholds are implied.

EXAMINATION 1 / 2 | 2026-11-12

Synthetic acute multi-system observation.
